

The Tehama “work from anywhere” solution for financial services companies

FOR A SECURE, COMPLIANT HYBRID WORKFORCE

Hybrid work is here to stay — and that poses challenges for many financial services companies. Tehama provides a secure virtual infrastructure for banks, credit unions, and other finance-sector organizations to work safely with an “anywhere” workforce.

Traditional remote work solutions, such as issuing corporate laptops to external contractors or deploying virtual desktop infrastructure (VDI) and desktop-as-a-service (DaaS) offerings, aren’t up to hybrid workforce demands. Laptops are easily compromised, lost, or stolen, while legacy VDI and DaaS are constrained by high costs and complexity.

Tehama’s one-of-a-kind platform gives financial institutions with large, distributed, or global workforces the infrastructure to enable the future of work quickly and securely.

Compared to legacy VDI solutions, Tehama is:

5X More Secure	10X Faster	25% The Price
--------------------------	----------------------	-------------------------

Two big challenges for financial services companies

Attracting and retaining talent

Enabling asymmetrical, asynchronous work from any location — whether at home or from any office/branch in the world — and at any time is key to hiring and keeping people who now expect a hybrid way of working.

Ensuring security and data compliance

Securing sensitive financial data is already difficult due to complex IT infrastructures and daily cyber threats — and will become even more so as companies expand their use of third-party contractors and consultants.

SECURING HYBRID WORK FOR FINANCIAL SERVICES

Tehama’s one-of-a-kind platform is a turnkey solution that lets enterprises launch role-based, ready-to-work, secure cloud work environments for anyone, on any device anywhere in the world — in less than an hour. It comes fully loaded with security features like privileged access management, data-loss prevention, and zero-trust network access, all designed to meet strict financial policies, compliance standards, and regulations. Its unique architecture creates a secure perimeter around virtual desktops without the need for complex infrastructure or additional tooling, making it easy to connect employees, contractors, freelancers, and vendors to sensitive and compliance-intensive financial data and applications.

1. Create a secure Tehama Workroom

The fully-managed Tehama workroom gives your users custom configured Windows and Linux virtual desktops. Manage, secure and audit all work performed.

2. Connect users to a Workroom

All work product is isolated in the Tehama Workroom, so no end user ever has possession of your data.

4. Work delivered: safely with zero trust

The Tehama Workroom operates as a virtual extension of your secured business infrastructure in the cloud.

3. Connect Workroom(s) to corporate infrastructure

The Tehama Multi-Path technology securely connects the work product to your infrastructure whether in the cloud or on-prem. Connect as many Workrooms as you need to your enterprise and the Internet, simultaneously.

Tehama's SaaS delivery model includes all updates, configurations, integrations, and support. Whether you choose a subscription or consumption-based model, we provide:

 **Flexibility**
Pay by the hour — so you can scale up or down as your needs change.

 **Predictability**
Pay per user per desktop, capped at 160 hours per month.

 **Clarity**
No hidden costs or unexpected bills.

BENEFITS OF TEHAMA FOR THE FINANCIAL SERVICES SECTOR

Faster time to value

Our cloud-based platform lets you deploy virtual work environments anywhere in the world, with on-demand desktop configuration and automated IT resource allocation for greater business scalability.

Built-in governance and compliance

Tehama has more than 80 built-in SOC 2 Type II controls, making it easy to meet regulatory requirements such as FINRA, PIPEDA, OSFI, NYDFS 23, and NYCRR 500. Every Tehama session is logged and recorded, so auditors and risk managers can ensure all compliance requirements are met.

Improved workforce productivity and user experience

Because virtual workspaces can be configured and provisioned in minutes, disruption and downtime are kept to a minimum. Employees simply log into Tehama and can immediately begin work with all the tools they need.

Optimized costs for remote/hybrid workers

Our software-as-a-service (SaaS) model helps reduce costs for cloud transfer, compute, GPU, and storage, as well as endpoint management and support costs — for a lower total cost of ownership compared to legacy VDI solutions.

Vendor consolidation

By combining all the tools and technologies for secure work from anywhere in a single platform, Tehama reduces unnecessary costs and complexity — no laptops to ship and no need for difficult integrations with third-party point solutions.

Faster, more efficient IT support

We centralize and optimize workflows across the IT lifecycle to simplify desktop and application delivery. We also manage, monitor, and support all Workroom services for faster IT response times and significant cost savings.

KEEP YOUR DATA SAFE WITH TEHAMA

Endpoint device isolation

Workers can collaborate securely and deliver services to only the on-premises applications or cloud-based Workroom they are authorized to access.

Data encryption

Everything that happens in a Tehama Workroom is encrypted, as is all communication between the Tehama platform and the financial services infrastructure — eliminating the need for untrustworthy VPN connections.

Policy-based access control

Organizations can restrict access by location, clearance level, and more. Multi-factor authentication, network segmentation, and a Secrets Vault for privileged credentials ensure all data in the Tehama platform is protected.

Tehama is the safer, smarter, more productive way for financial services companies to deploy a hybrid workforce.
